

iSupervision

A IntelliJ based program that lets users sign in, based on their profile they can either register for a project or remove or create a new project.

Installation

It's important to have a JRE to run the code. 1. Download the files 2. Open the file in your JRE 3. Enter application.java

Recommended IDE

IntelliJ IDEA is an Integrated Development Environment (IDE) designed to maximize developer productivity, particularly for Java and Kotlin

iSupervision function

You are welcomed with a sign in screen in the file that you should have already downloaded there are four files

- user.csv (which includes all the users personal informations their Id and password)
- topic.csv (all topics that are available)
- student.csv (all students and their id)
- enrollment.csv (and topics each student is enrolled to)

Student can register for a topic:

1. The topic has to be free
2. The student can only register for a bachelor topic if project has been done before and for a masters topic if bachelor has been done
3. Student can be removed from a topic by admin

Admin & assistant :

- Admin function
 - can remove student from topic
 - checks if enrollments are valid
- assistant function
 - can create new topics
 - can see all the topics
